Sekisyu disaster preventive roofing tile 'Gao'

KIMURA ROOFING TILES CO.,LTD.

Our roofing tiles can be used on building with a roof slope of 33% degrees.

The material is different. The hardening is different.
 The thickness is different. The skillfulness is different.
 The shape is different.
 That is why Sekisyu Roofing tiles are said to be high quality roofing tiles.

Color Choice

Points of Sekisyu Roofing Tile

- Material** Our roofing tiles are fireproof and made of carefully selected, flexible clay.
- Firing Temperature** Our roofing tiles are fired at a temperature higher than 1200°C(2192°F), the highest level for the ceramics. So they are durable against the heat and the cold, which maintains the roof's beauty forever.
- Thickness** Its thickness, which is expressed in millimeters, creates not only the strength but also the dignified and high-grade product image.
- Featuring** Our roofing tiles are designed to be durable against rain and gale.
- Shape** Our S style roofing tiles are European style and designed to prevent rain from entering.

Specs. of the Product
